

Champ-Richer snacks skin and coat with duck

Purpose

Snacks have been produced with the use of the newest technology, which allowed us to fill the extruded snack coat with a filling enriched with health-promoting ingredients. The delicious and crunchy treats **with duck** include beneficial ingredients, which enhance the condition of dogs' skin and coat.

- Contain biotin and beneficial unsaturated Omega-3 and Omega-6 fatty acids.
 - Biotin, widely referred to as the “beauty vitamin”, supports the process of generation of keratin – a natural component of skin and coat. It also helps to limit the greasiness of coat.
 - The Omega-3 and Omega-6 fatty acids were sourced in the process of extracting linseed oil from flaxseeds. Omega-3 fatty acid strengthens the immune system. Omega-6 fatty acid is an important component of your dog's diet, which has a beneficial effect on your pet's skin and coat.
- Produced with the use of rice flour in order to minimise the risk of food intolerances.
- They are a tasty reward for dogs (for example after a bath).

Free from: artificial colours, preservatives, wheat, soya and GMO.

Instructions for use

- small dogs <5 kg 1-2 pcs/day
- medium dogs 5 – 10 kg 3-4 pcs/day
- big dogs >10 kg 5-8 pcs/day
